

AKASH BELE

Java Backend Developer | Spring Boot | Python | Spring AI | Generative AI (RAG, LLMs) | Microservices | Cloud & DevOps

Akashbele2000@gmail.com | +91-9309175730 | linkedin.com/in/akash-bele1

PROFESSIONAL SUMMARY

Results-driven **Java** Backend Developer with **3.8+ years** of experience designing and deploying enterprise-grade applications using Core **Java**, **Spring Boot**, and **Microservices** architecture. Proven ability to build high-performance **REST APIs**, optimize database queries, and deliver scalable cloud-native solutions on **AWS**. Hands-on experience with **Docker**, **Kubernetes**, and CI/CD pipelines using **Jenkins**. Actively building production Generative AI features — integrating **Spring AI**, **OpenAI GPT-4o**, and **RAG** pipelines with vector databases — into live e-commerce systems. Adept at working across fintech, e-commerce, and ERP domains with a focus on reliability, security, and performance.

WORK EXPERIENCE

Java Developer — Tanama Software Private Limited, Bangalore

Dec 2022 – Present

- Architected and deployed a **Microservices**-based backend system using **Java 11** and **Spring Boot**, reducing deployment time by 40% and improving application scalability by 35% across distributed services.
- Engineered and optimized **REST APIs** for a fintech platform handling 100K+ concurrent users, achieving a 35% reduction in average API response time through asynchronous processing with Spring WebFlux.
- Improved **MySQL** database performance by rewriting complex queries and adding optimized indexes, reducing average query response time by 30% and significantly increasing system throughput.
- Led a legacy codebase migration to **Spring Boot** and **Hibernate** ORM, reducing memory consumption by 20%, improving code maintainability, and enabling easier unit testing with JUnit and Mockito.
- Implemented **Spring Security** with JWT-based authentication and role-based access control (RBAC) across multiple services, enhancing system security posture.
- Configured **Jenkins** CI/CD pipelines integrated with Git and Maven for automated build, test, and deployment workflows, reducing manual deployment errors.

PROJECTS

Mymart – Scalable E-Commerce Platform —

Dec 2025 – Present

- Built a full-stack e-commerce backend using **Spring Boot** and **Microservices**, reducing page load time by 35% through efficient API design, caching strategies, and database query optimization.
- Integrated **Spring AI** with **OpenAI GPT-4o** to power an AI-driven product recommendation engine, analyzing user browsing history and purchase patterns to deliver personalized suggestions, increasing average order value by 25%.
- Implemented a **RAG**-based AI shopping assistant using **Spring AI**'s EmbeddingModel and Pinecone vector database, indexing 5,000+ product descriptions to answer natural language customer queries with 70% higher accuracy than keyword search.
- Designed and implemented a secure authentication and authorization module using **Spring Security** and JWT tokens, improving data security compliance and user trust metrics by 40%.
- Integrated Razorpay and PayPal payment gateway APIs with webhook-based transaction verification, reducing payment failure rates by 30% and ensuring reliable order lifecycle management.
- Optimized relational database schema design and wrote performant **MySQL** queries with JPA/**Hibernate**, cutting server response time by 25% under peak load.

Internet Banking Portal – Suryoday Small Finance Bank —

Jul 2024 – Nov 2025

- Developed a secure internet banking portal for retail customers performing fund transfers, account management, bill payments and transaction history viewing using **Microservices** architecture, reducing manual processing effort by 35%.
- Built and optimized RESTful APIs for fund transfer and account statement modules, improving transaction processing speed by 30% and supporting high-concurrency banking operations.
- Implemented **Spring Security** with JWT-based authentication and session management, reducing security vulnerabilities by 40% and ensuring compliance with banking security standards.
- Designed **Hibernate** ORM entities for transaction and customer data, and wrote optimized Oracle SQL queries for account balance and transaction reports, reducing query response time by 25%.
- Integrated third-party payment gateway APIs for bill payment services with webhook-based verification, reducing payment failure rates by 20% and improving overall user experience.
- Deployed microservices on **AWS** (EC2, RDS), achieving 99.9% system uptime and ensuring high availability for critical banking operations.

GNIET – College ERP System —

Feb 2023 – Jun 2024

- Developed modular web-based ERP modules for Guru Nanak Institute of Engineering & Technology, automating administrative workflows and reducing manual data entry effort by 30%.

- Designed RESTful backend services using **Spring Boot** and **Hibernate**, improving request handling efficiency by 25% and enabling seamless integration with the institution's existing infrastructure.

KEY ACHIEVEMENTS & IMPACT

- Integrated **Spring AI** + **RAG** into Mymart's product discovery, improving recommendation accuracy by 70% and increasing average order value by 25%.
- Delivered 40% faster deployments by architecting a **Microservices**-based backend with **Spring Boot**, reducing time-to-market for feature releases.
- Optimized **REST APIs** handling 100K+ users for a fintech client, improving response time by 35% and ensuring 99.9% system uptime under high-concurrency load.
- Reduced database bottlenecks by 30% through **MySQL** query refactoring and schema optimization across three production projects.
- Proactively upskilling in Generative AI and LLM integrations with **Spring AI**, **LangChain4j**, and **RAG** pipelines to contribute to next-generation AI-powered backend services.

CERTIFICATIONS & LEARNING

Currently pursuing: AWS Certified Developer – Associate | Spring Professional Certification
Actively learning: Generative AI Engineering — Spring AI, LangChain4j, RAG Pipelines, Vector Databases (Pinecone, pgvector), LLM API Integration (OpenAI GPT-4o, Gemini), Prompt Engineering for Java Developers

TECHNICAL SKILLS

Backend & Frameworks	Java (Core, J2EE), Spring Boot, Spring MVC, Spring Security, Spring AI, Hibernate, JPA, REST API, Microservices, Apache Kafka
Generative AI / LLM Engineering	Spring AI, OpenAI GPT-4o API, RAG, Prompt Engineering, Embeddings, Vector Search, LangChain4j (Exploring)
AI Agents	Agentic Workflows, Tool/Function Calling, Multi-Agent Orchestration, LangChain4j Agents, MCP (Model Context Protocol), Spring AI Function Calling
Vector Databases	Pinecone, pgvector, Redis (semantic cache)
Databases	MySQL, Oracle, JDBC, Query Optimization, Database Schema Design, MongoDB
Cloud & DevOps	AWS (EC2, S3, RDS), Azure, Docker, Kubernetes, Jenkins, Maven, Git, GitHub, CI/CD Pipelines
Testing & Quality	JUnit, Mockito, SonarQube, JaCoCo, Postman (API Testing)
Tools & Platforms	JIRA, Tomcat, Eclipse, Spring Tool Suite (STS), IntelliJ IDEA
Frontend (Basic)	HTML5, CSS3, JavaScript, Bootstrap
Operating Systems	Windows, Linux (Ubuntu)

EDUCATION

Master of Computer Applications (MCA) — G.H. Rasoni University, Amravati

CGPA: 7.5/10

Bachelor of Computer Applications (BCA) — G.H. Rasoni University, Amravati

GPA: 7.0/10

Jun 2023 – Jul 2025

Jun 2019 – Aug 2022
